

Major Update to CARES® CAD/CAM Now Faster and Even More Versatile

Faster Implant Restorations

In the newly released CARES 8.0 software Straumann introduced some exciting enhancements. They include X-Stream™. This offers new solution-driven functionality by providing a one-step single-tooth implant-based restoration.

This means time and potential surgery cost saving by increased productivity and profitability. This is achieved by streamlining the workflow and reducing the turnaround time with only one scan and design step

The essence of digitalisation in dentistry is to streamline the prosthetic workflow and to simplify product handling. This is exactly what the Straumann® CARES® X-Stream™ solution aims at.

Straumann® CARES® Variobase™ Abutment Introduced

The new Straumann® CARES® Variobase™ Abutment consists of a customized coping and an abutment which are adhesively connected. The Straumann® CARES® Variobase™ Abutment is specifically designed for more flexibility and efficiency in the treatment process, offering high flexibility in adapting to the patient's specific oral situation.

This makes the restorations highly efficient and very versatile. The copings are available in reduced tooth form and can be directly veneered. This coupled with quick turnaround times from scan to coping arriving at the laboratory again speeds up the process.

You are also guaranteed Straumann predictability and reliable quality with original Straumann® connection and validated long-term performance. They are suitable for all current Straumann® Platforms (NNC, RN, WN, NC, RC) with an original connection.
