

### DuraFlex™ - All the Benefits of Flexible – None of the Drawbacks

#### Why DuraFlex™ is so Good

DuraFlex™ from Myerson is a breakthrough thermoplastic that resolves the limitations found in older flexible materials that are nylon based, whilst still offering all the advantages of a flexible denture.

The advanced thermoplastic used to make DuraFlex™ has a semi-crystalline polymer structure, making it both strong and hygienic. It is clinically unbreakable and more durable than acrylic. Myerson's internal research has shown that this state-of-the-art thermoplastic material is unusually resistant to water absorption, making it less prone than nylon to absorbing stains or odours.

DuraFlex™ also offers highly desirable aesthetics, with a veined appearance in four gingival colours as well as clear. The material is translucent, allowing the natural colouring of the underlying tissue to show through, giving it a virtually invisible appearance.

The revolutionary characteristics of DuraFlex™ means we are able to rebase, repair, and even add teeth to DuraFlex™ flexible dentures using the same material. This means the altered denture is still flexible and any adjustment is permanent.

#### Working with DuraFlex™

We have now made the move completely to Myerson's DuraFlex™ for all of our flexible dentures. The material has proven to be excellent providing good flexibility, aesthetics, adaptability and, even in this short period, impressive wear characteristics.

Already we have added teeth to one of the first DuraFlex™ dentures we made. Unlike many other systems, such as Valplast and Flexite, we added the tooth in the same material so we had a perfect match and the altered denture was still completely flexible. This means the alteration was a permanent solution, rather than a temporary one done in a different material. Impressively, unlike other popular materials, the denture looked exactly the same as the day we made it, no scratches, discolouration etc., despite being worn for a few months.

Material Characteristic	DuraFlex™	Other Systems
Flexible and clinically unbreakable	YES	YES
Able to add, relines, alter in the same flexible material	YES	NO
Easy to look after - Scratch resistant	YES	NO
Won't absorb moisture so stain and odour resistant	YES	NO
Easy to adjust in the surgery	YES	NO

#### Extra Special Offer - Flexible Dentures From £100!

As an introductory offer to DuraFlex™ we are running a promotion until the end of 2014 offering a 20% discount off our standard prices via this voucher.

This will include all flexible restorations including flexible clasps, removable bridges etc. If you are currently using another leading product you owe it to your patients to try DuraFlex™, with the reduction in price you now have the perfect opportunity.

To redeem this offer cut out this voucher and complete the information on the back.

#### New Pricelist

We are introducing a new pricelist from 1 October. This will be the first new pricelist in nearly four years and we have taken the opportunity to amalgamate the various pricelists from the other laboratories we have merged with as well as the new products, such as CAD/CAM. This has resulted in some prices decreasing, as well as many others staying the same. Where there have been increases they have been kept to a minimum. We have initially produced a condensed version of the pricelist but we will also be producing our comprehensive version which we will distribute digitally. Please let us know if you would like a copy of this version.

**Extra Special Offer - Flexible Dentures From £100!**
