

Clear Clasps

Most know we can provide flexible tooth coloured clasps but did you know we can also provide clear clasps?

Made of the same type of material as the tooth coloured clasps the clear clasps can look far more aesthetically pleasing.

Same Flexibility

The clear clasps offer the same level of flexibility and strength as their tooth coloured counterparts but tend to blend in better. They are totally transparent, so take on the colour of the tooth and / or gum which helps them blend into the mouth.

Same Price

The clear clasps are the same price as the tooth coloured versions. Next time you are looking to use a tooth coloured clasp why not consider a clear clasp. From our experience patients seem to prefer them because they do 'hide' well.

If you would like further information please let us know.

CAD/CAM News

There have been a number of updates and improvements to our CAD/CAM offerings. Below are just a couple of the highlights.

More Translucent Zirconia

We are now able to offer semi-translucent Zirconia restorations. Zirconia has long been the material of choice for strength and good aesthetics. However, it was a dense material so many still preferred E-Max or similar for the aesthetic zone. Now we can provide all the benefits of Zirconia with improved aesthetics.

Larger Abutments

CAD/CAM abutments have long been the best choice for most implant restorations. Straumann now have made them even better. By introducing larger titanium blanks they have improved on a great product. The new blanks have significantly increased height and diameter whilst lowering the emergence profile for bone level implants.

If you would like further information about CAD/CAM or implants please let us know.

Please Note: We Will Close For The Christmas Holidays
From Close Of Business On Friday 20 December 2013
And Re-Open On Thursday 2 January 2014

We Wish You A Happy Christmas
And A Prosperous New Year
