

## **Price List CD Loading Instructions**

Insert the Price List CD into your PC's CD/DVD Drive, the program should start automatically.

If the CD does not auto start please remove the CD from the drive and then reinsert.

If the program still doesn't load automatically then using Explorer or via your (My) Computer shortcut, locate the CD/DVD-ROM drive where the CD has been inserted. Typically, this is drive "D:\\" or "E:\\". Also, this drive should now be labelled "Price List 2008". When located, double click on the icon to start the menu loading.

Alternatively in Windows click on the "Start" button, choose "Run" and in the box type D:/autorun.exe (where D: is the letter of the drive where you have inserted the CD)

Please Note: If using Vista and User Account Control (UAC) is enabled, you will be presented with a box allowing you to "Install or run program" "AutoRun.exe" or "Open folder to view files". Select "Install or run program" and the menu will launch. Please be assured that this is an inherent function of Windows Vista, not the CD.

If you continue to experience difficulty, please contact us on 0121 544 8855 or via our [feedback web form](#).
